

## Take the next step.

Add Nuvolo OT Security to Your Connected Workplace

## Don't Have Time or Staff to Focus on OT Security?

Nuvolo Makes it Easy

You know your Operational Technology (OT) such as medical devices and facility equipment pose a security risk. However, probably like most healthcare organizations, you don't have the resources to focus on a comprehensive OT security program. Nuvolo's OT Security solution does the work for you.

Adding Nuvolo OT Security to your Nuvolo Connected Workplace gives you full visibility into your OT security risks and provides your team with automated workflows to respond quickly to identified threats.

## Any Security Incident Can Impact Patient Care. Here's How:

Impact on Patient Heart Attack Mortality Rate

**0.23 – 0.36%**

Increase in Heart Attack Mortality after Security Event <sup>1</sup>

On average, a security event at an acute-care inpatient hospital was associated with an additional 23-36 deaths per 10,000 AMI discharges per year.

Impact on Patient Time to ECG (min)

**2.0 – 2.7 minutes**

Hospital time-to-ECG increase after Security Event <sup>1</sup>

Slow or extended security incident remediation efforts were associated with insufficient patient care and outcomes.

## Knowing Where Your Devices Are Is Critical to Fast Remediation

That's where OT Security comes in

- Nuvolo brings in the device discovery and security monitoring information from your existing discovery tool.
- We match the security event information to your affected devices.
- An automated response with remediation instructions is routed to your clinical engineer or manufacturer's field technician for quick remediation
- Nuvolo tracks the progress throughout the remediation.

"We're now reducing cyber risk and the vulnerabilities associated with it and more importantly patient risk and in the operations that support care."
